

INDUSTRY READINESS PROGRAM

IRP Progress Management System

1. What This Document Is

This is an **idea brief**, not a finished specification. It explains the application I would like the team to build for the Industry Readiness Program (IRP). Read it before our meeting so you understand what problem we are solving and how it should behave. On the day, you can interview me and ask anything that is unclear — the last section lists good questions to get you started.

In one line

Build a web application where **students log their daily progress**, a **mentor (admin) reviews and scores it**, and everyone can see — on a dashboard — **who is performing well**, with automatic monthly and quarterly evaluation reports.

2. Background & The Problem

The IRP currently runs with **two batches of five students each (10 students in total)**. Every day, students attend meetings, work on tasks, and contribute in different ways. **Imagine** having one place where all of this is captured — so every student's progress is clearly visible, and we can recognise and reward those doing well in a fair and transparent way.

We want one system that captures daily activity from **both sides** — what the student says they did, and what the mentor confirms — and then turns that into a fair, transparent evaluation and clear reports.

3. Who Uses The System (Roles)

There are two types of login. The system must show different screens and permissions depending on who logs in — this is called **role-based access**.

Role	What they can do	What they cannot do
Admin / Mentor <i>The person running the program</i>	Admit or remove students; review & approve student updates; record their own daily notes, attendance, meetings, tasks and scores for each student; decide what counts towards evaluation; view all dashboards; generate reports.	—
Student <i>IRP intern</i>	Log in daily; add time worked, meetings attended, contributions made; submit the work they have done; edit their entry before it is approved; view their own progress.	Cannot see or edit other students; cannot approve their own entries; cannot change scores or evaluation.

4. What The System Should Do (Core Features)

4.1 Login & Access

- Separate **admin login** and **student login**.
- Admin can **admit a new student** or **remove a student** from the program.
- Each student belongs to exactly one batch. There are **two batches for now**, but the system should be able to **grow to many batches** over time.

4.2 Student Daily Update

Every day the student logs in and records:

- **Time worked** — how many hours they put in.
- **Meetings attended** — which meetings they joined.
- **Contribution made** — what they contributed that day.
- **Work submitted** — the actual task or output they completed.

Students can **edit their entry** and then **submit it as a report to the admin** for review.

4.3 Mentor (Admin) Daily Board

The admin has a **separate board** where she records her own view of each student. On this board she can:

- Pick a student from a **dropdown list of names** and choose a **date**.
- Record **attendance**, **meetings attended**, **daily tasks**, **scores** and her **evaluation notes**.
- Use a **tick box on each item** to mark whether it **counts towards that student's evaluation**.

4.4 Review & Approval Workflow

This is the heart of the system. The admin decides whether what a student enters actually adds to their progress.

- 1 **Student submits** their daily update (they can edit until approved).
- 2 **Admin gets a notification** that a new report is waiting.
- 3 **Admin reviews each item** and approves it.
- 4 **Admin decides**, with a tick box, whether each approved item **counts towards the evaluation** or not.
- 5 **Student gets a notification** once their update has been reviewed, so they know the outcome.

4.5 AI Summary & Evaluation

The system reads **both the student's entries and the mentor's entries** and produces:

- A **short, plain summary** of each side, so the admin can understand a student's activity at a glance.

- An **evaluation using rubrics** (a scoring guide — see Section 5).
- A combined score where the **admin's input carries more weight** than the student's self-report.

4.6 Dashboards

Admin (Mentor) dashboards:

- **Main dashboard** — an overall summary with the **latest information**, showing at a glance who is performing well (per batch).
- **Student detail view** — the admin can click into any student and see all their progress. Entries are shown **newest first (descending order)**.

Student dashboard — the screen a student sees when they log in. It should help them understand **where they are and what to do next**. Suggested items (to confirm together):

- **Program progress** — how far through the program they are, e.g. *"Month 2 of 6 completed"*, with how much is left to complete.
- **What to do next** — whether today's update is still to be submitted, and any tasks still pending.
- **Status of recent updates** — whether each submitted update is **waiting for review, approved, or not counted**.
- **Attendance & hours** — a simple summary of meetings attended and total hours logged.
- **Latest mentor feedback** — recent notes or comments from the admin.
- **Upcoming meetings / reminders** — what is coming up next.

Open point for our discussion

We still need to decide whether students can see their **own scores and ranking**, or whether that stays with the admin only.

5. How We Score Progress (Rubrics & Weighting)

A **rubric** is simply a scoring guide — a set of things we measure and how many points each is worth. The same rubric is applied to every student so the process is fair. The example below is a **starting point for discussion** — the exact criteria and weights are something we can finalise together.

Criteria	What it measures	Source	Weight
Attendance	Meetings and sessions actually attended	Mentor	20%
Task completion	Work submitted and approved as done	Both	25%
Contribution & initiative	Value added to the team and program	Both	25%
Effort / time	Consistent daily hours logged	Student	10%
Mentor evaluation	Overall judgement of the mentor	Mentor	20%

Key rule — the mentor's word carries more weight

A student's self-report only counts if the **admin approves it** and ticks that it **counts towards evaluation**. The mentor's scores always have **higher weight** than the student's self-reported entries.

6. Reports & Rewards

6.1 Monthly Report & Reward

- A **final evaluation report** can be **downloaded or sent** each month as a PDF.
- The monthly cycle runs **from the 10th of one month to the 10th of the next**.
- Each batch produces **one monthly reward winner** — the most deserving student.
- The PDF must **clearly state the reason** that student won.

6.2 Quarterly (3-Month) Major Evaluation

- Every **three months**, a **major evaluation** runs for both batches.
- It decides **which student from each batch is awarded**.
- Important: this award is **NOT based on the monthly winners** — it is a fresh, independent evaluation over the whole quarter.

Golden rule — batches are never mixed

At **every** stage — daily tracking, dashboards, monthly rewards and the quarterly award — **Batch 1 and Batch 2 must be kept completely separate**. Students only ever compete within their own batch.

7. Rules To Remember (Business Rules)

#	Rule
R1	There are 2 batches with 5 students each . Batches are never mixed at any point.
R2	Both students and the mentor update daily .
R3	A student entry only counts once the admin approves it and ticks that it counts towards evaluation .
R4	The mentor's input outweighs the student's self-report.
R5	All progress entries are displayed newest first (descending order) .
R6	Monthly cycle = 10th to the 10th ; one reward winner per batch, with the reason clearly stated.
R7	The quarterly award is independent of the monthly winners.

8. Screens We Expect (Rough List)

You do not have to design these exactly — this is just to picture the app. We can refine them together.

- **All** **Login screen** — choose/enter as admin or student.
- **Student** **Daily entry screen** — add time, meetings, contribution, submit work; edit & submit.
- **Student** **My progress** — the student's own history, newest first.
- **Admin** **Main dashboard** — overall summary, latest info, who is performing well (per batch).
- **Admin** **Mentor board** — name dropdown + date picker, record attendance/tasks/scores, tick "counts towards evaluation".
- **Admin** **Approvals / notifications** — review and approve submitted student reports.
- **Admin** **Student detail view** — full progress of one student, newest first.
- **Admin** **Reports** — generate & download monthly / quarterly PDF reports.
